

ICT in Schools, a partnership program

Get involved. Contribute to your community.

CSIRO Education's Scientists and Mathematicians in Schools program is expanding to include a new element, *ICT in Schools, a partnership program*. In 2013 additional funding for SMiS was announced to complement the release of the Australian Government's National Career Development Strategy. This new element of SMiS provides an opportunity for ICT professionals to partner with teachers to bring real world ICT to classrooms and inspire and motivate students in the teaching and learning of information and communication technologies.

ICT professionals work in a range of locations and settings and this will be reflected in the appearance of the partnerships that are created. Whether the partnership is supporting a teacher with a group of keen students in a "code club" in their lunchtime, mentoring students entering competitions or supporting students to add technology to an interactive art installation the ICT professional will be showcasing the diversity of their careers and challenge the ICT stereotype.

What can you as an ICT professional get out of joining the program?

- Inspire and engage students in Information and Communications Technology
- Raise profile of ICT in school
- Share your Passion for ICT and technology in general
- Share your knowledge
- Give back to your old school
- Help your children's school
- Get involved with your community
- Play with technology
- FUN!
