THE CRAZY GOOD TECH CHALLENGE with IBM SkillsBuild

Activating the voice of young people on the tech topics that matter!

As our society, business and government grapple with this period of change and uncertainty, it's time to really lean into the possibilities by unleashing the creative power of young people.

How does it work?

Working in small teams, students will be guided through a 4-step recipe for generating bold and inspired ideas around these **four themes:**

Each team will develop and submit an idea into the national challenge, and four winning ideas (one from each theme) will be brought to life with support from IBM and CIC.

The Tech Challenge unlocks the agency and ingenuity of young people by supporting them to imagine new possibilities, have fun and make their mark.

- Cyber Safe - Cyber Smart Citizens
- Learning in the age of Artificial Intelligence
- Gearing up for the Future World
- Healthy Habits for Gamers and Techies

The challenge is enabled by IBM SkillsBuild, a digital learning and credentials platform to which all participating students will gain access to.

The 4-step recipe:

Explore & Discover → Generate Ideas → Prototype, test & twist → Submit & Promote

The Tech Challenge strengthens young peoples ability to:

- Tap into their agency
- Think critically about world issues
- Be creative problem solvers
- Collaborate & communicate

The details...

There is no cost for participating and the challenge is designed for Year 8 – 10 students. Multiple year levels can participate.

CIC facilitators can lead the Tech Challenge across a one day immersion program at your school. Alternatively, CIC can provide all of the resources and support needed for schools to successfully lead the Challenge themselves.
